11.
  1. inline
  2. internal
  3. external
  4. browser
12.
  1. inline
  2. id
  3. class/attribute
  4. element
13. to prevent sql injection
14. app\_data
15.
  1. height: 35px
  2. width: 70px
16.
  1. height: 40px

2. width: 57px
17.
  1. ID: 1
  2. Class/Attribute: 2
  3. Element: 4
18. \_ViewStart is used to create a starting point and hold common code for views
19. \_ViewImports is used to define namespaces to be used for the project like the tag helper imports needed for lab 4
20. Get
21. Tells the browser what type of document it is, so browser can properly load the html5 or whatever is sent to it
22. Block elements always start on their own lines and inline stay on the same line
23. If the image is not present, the alt provides a description of the image. Also helpful for screen readers
24. Provides a convenient syntax that ensures the correct use of IDisposable objects.
25. HTML can be written many ways, but the more concise a programmer can write it to do what he or she wants it to do the better and more readable their work will be
26. Sometimes we do not need to pass a whole business object, or we need to pass more info than just the business object and these additional classes provide us that option
27. Dependency injection is awesome because it makes updating a value through the whole website easy
28. HyperText Markup Language
29. All the above
30. ul
31. ViewModel
32. Div#specificBox
33. All the above
34. The Model
35. Put
36. Title

37. All the above

38. Name: Jordan
